DATA SHEET

RISK ORCHESTRATOR

Dynamic Protection  
for Complex Fraud

Strong protection against fraud doesn't have to be complicated.

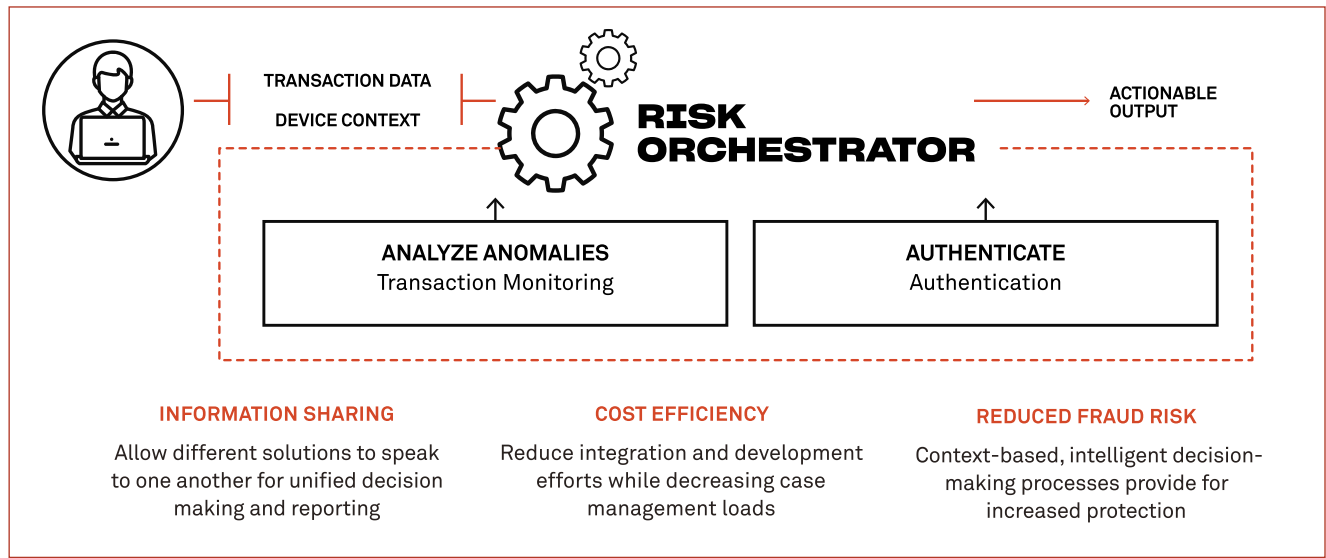

A layered approach is the most effective way to fight fraud. However, disparate solutions leave vulnerability gaps – and when these systems don't communicate with each other effectively, all of the benefits of layering can be lost in translation.

It doesn't have to be this way. Risk Orchestrator allows integrated systems to coordinate and communicate seamlessly with one another, providing robust protection without hassle. Simplify your anti-fraud stance by making intelligent decisions using contextual data gathered across all stages of the fraud lifecycle – empowering you to take the best actions to protect your customers and business.

BENEFITS AT-A-GLANCE:

- Balance user experience with security
- Simplify fraud management through an easy-to-use console
- Minimize cost by reducing number of vendors
- Orchestrate flows to ensure customized, agile protection
- Harness the power of strong rules and intelligent machine learning

### INTELLIGENCE

Take advantage of intelligent systems such as transaction monitoring to leverage machine learning and holistic analysis from Transaction Monitoring.

### CONTEXT

Gain insight into device status, session information, and transaction details to determine the risk level of a process initiated from a given device using Transaction Monitoring and Detect Safe Browsing.

### ACTION

Verify transactions identified as high risk using advanced authentication through a proven platform. Authentication offers a wide variety of factors to ensure secure, convenient authentication.

## KEY ADVANTAGES OF RISK-BASED AUTHENTICATION

### AGILE FRAUD DETECTION

Intelligent solutions work together to react quickly to both new and known threats

### EASE OF INTEGRATION

A single solution provides streamlined integration with little additional coding required

### DRAG-AND-DROP INTERFACE

Orchestrate workflows with ease, and enjoy the flexibility of completely customizable protection

### UNIFIED PORTAL

Visualize and customize fraud protection through a single interface

### QUALITY CUSTOMER EXPERIENCE

Avoid forcing customers to jump through unnecessary hoops to make secure transactions

## FEATURED USE-CASES

### RISK BASED AUTHENTICATION

Harness the power of machine learning-based transaction analysis combined with strong step-up authentication

### RISK AND CONTEXT BASED AUTHENTICATION

Partner analysis, device context, and next-gen authentication for increased security

### STREAMLINED INTEGRATION

Enjoy the benefits of transaction monitoring – without the need for lengthy integration

### THIRD-PARTY IMPLEMENTATION

Leverage previous security investments with a plug-and-play architecture
